MODEL M-41

MODEL C-42

ASTATIC RECORDING HEADS

Astatic Recording Heads are offered in three models, all particularly well suited to home recording. They have a high order of needle stiffness which permits recording on a wide variety of record blanks. They have a wide frequency range and excellent power sensitivity.

Crystal recording heads, listed below, are replacements for practically all of the home recording equipment employing crystal cutters.

The M-41-8 Magnetic Cutter is mechanically and

electrically interchangeable in several popular recorder units originally equipped with magnetic cutters.

The M-41-500 Magnetic Cutter is designed for professional type recorders originally using magnetic equipment with 500 ohm output circuits.

Magnetic and crystal cutters are NOT electrically interchangeable. Circuit changes must be made, which may or may not be practical depending on the original circuit involved.
